Mission

Design a complete user experience for the Secure Dance Academy Management System before frontend development begins.

The objective is to create an intuitive, secure and professional interface suitable for a production SaaS application.

Every screen should improve productivity.

Every interaction should reduce user errors.

Objectives

Create the complete visual blueprint.

Design every page.

Design every workflow.

Create reusable components.

Define the design system.

Ensure accessibility.

Support responsive layouts.

Prepare the project for frontend implementation.

Design Philosophy

Design for real users.

Reduce clicks.

Reduce confusion.

Reduce training.

Support secure behaviour.

Keep layouts clean.

Prioritize readability.

Prioritize consistency.

Every design decision should have a purpose.

Target Users

Administrator

Coach

Parent

Artist

Every role should receive its own optimized experience.

Avoid exposing unnecessary information.

Deliverables

Produce

Information Architecture

Navigation Map

User Flow Diagrams

Wireframes

High Fidelity Mockups

Responsive Layouts

Design System

Component Library

Accessibility Review

Interaction Specifications

Design Tokens

Typography Guide

Colour Palette

Icon Guide

Prototype

Information Architecture

Design the application hierarchy.

Authentication

Dashboard

Artists

Parents

Coaches

Attendance

Performances

Medical Records

Activities

Reports

Notifications

Settings

Audit Logs

Profile

Help

Navigation should remain simple.

User Flows

Design complete workflows.

Registration

Login

Forgot Password

Dashboard

Attendance

Performance Entry

Medical Record Update

Reports

Settings

Logout

Document every interaction.

Minimize unnecessary navigation.

Dashboard Design

Design dashboards for

Administrator

Coach

Parent

Artist

Each dashboard should include

Summary Cards

Charts

Recent Activity

Quick Actions

Notifications

Upcoming Events

Tasks

Recent Attendance

Recent Performance

Present important information first.

Authentication Screens

Design

Login

Register

Forgot Password

Reset Password

Email Verification

Unauthorized

Session Expired

Access Denied

Authentication should feel secure and simple.

Feature Screens

Design complete pages.

Users

Artists

Parents

Coaches

Attendance

Performances

Injuries

Medical Records

Activities

Reports

Audit Logs

Settings

Every page should have a clear purpose.

Form Design

Every form should include

Clear Labels

Helper Text

Validation

Required Indicators

Success Messages

Error Messages

Confirmation Dialogs

Loading Indicators

Prevent duplicate submissions.

Prevent accidental data loss.

Table Design

Design enterprise-grade tables.

Support

Search

Filtering

Sorting

Pagination

Column Selection

Export

Bulk Actions

Row Actions

Status Badges

Tables should support efficient daily work.

Search Experience

Implement

Global Search

Module Search

Quick Search

Advanced Filters

Saved Filters

Recent Searches

Highlight Results

Search should reduce navigation.

Notifications

Design

Success Messages

Information Messages

Warnings

Errors

Session Alerts

Security Alerts

System Announcements

Notifications should be useful.

Never interrupt users unnecessarily.

Design System

Create reusable components.

Buttons

Inputs

Text Areas

Select

Checkbox

Radio

Date Picker

Cards

Tables

Charts

Dialogs

Drawers

Badges

Avatar

Breadcrumb

Tabs

Accordion

Toast

Pagination

Search Bar

Filter Panel

Every component must be reusable.

Visual Identity

Define

Primary Colour

Secondary Colour

Success

Warning

Danger

Information

Neutral

Dark Mode

Typography

Spacing

Border Radius

Shadows

Grid System

The interface should feel modern and professional.

Accessibility

Meet WCAG 2.2 AA.

Support

Keyboard Navigation

Focus Indicators

Screen Readers

Semantic HTML

Colour Contrast

Responsive Text

Accessible Forms

Accessible Tables

Accessibility is mandatory.

Responsive Design

Design layouts for

Mobile

Tablet

Laptop

Desktop

Ultra-wide Displays

Every feature should remain fully usable.

Empty States

Design meaningful empty states.

Explain why data is missing.

Suggest next actions.

Provide shortcuts where appropriate.

Never leave blank screens.

Loading States

Create

Skeleton Screens

Loading Buttons

Progress Indicators

Table Loading

Chart Loading

Loading should improve perceived performance.

Error States

Design

404

403

500

Validation Errors

Network Errors

Server Errors

Every error should help the user recover.

Security Experience

Support secure behaviour.

Password Strength Meter

Session Timeout Warning

Delete Confirmation

Sensitive Action Confirmation

Permission Messages

Audit Notifications

Security should build user confidence.

Prototype

Produce an interactive prototype.

Demonstrate

Navigation

Authentication

Attendance Workflow

Performance Workflow

Dashboard Navigation

Settings

Reports

Prototype should represent the complete application.

Documentation

Produce

Design System Guide

Accessibility Report

Responsive Guidelines

Interaction Specifications

Developer Handoff Notes

Acceptance Criteria

Every required page exists.

Every role has a dashboard.

Navigation is complete.

Forms are consistent.

Tables are reusable.

Accessibility is implemented.

Responsive layouts are complete.

Design system is documented.

Prototype is interactive.

Design is ready for frontend development.

Design Review Checklist

Verify

Navigation is intuitive.

Pages are consistent.

Components are reusable.

Forms reduce user errors.

Tables improve productivity.

Accessibility is complete.

Responsive layouts work.

Loading states exist.

Error states exist.

Empty states exist.

Security interactions are clear.

Developer handoff is complete.

Definition of Done

The complete user experience has been designed.

Every page has been specified.

Every interaction has been documented.

Every component belongs to the design system.

Accessibility requirements have been satisfied.

Responsive layouts are complete.

The prototype accurately represents the application.

The design is approved and ready for frontend implementation without requiring significant redesign.
